General

The SV Ci MT manifold is used with the Selector Valve system (SV22), where all cylinders connected to the manifold (and to the distribution manifold if no non-return valve is fitted) are to be activated at the same time.

The manifold consists of a Ci MT manifold and a pipe kit which allows it to be installed directly between two SV22 Tees.

Specifications

See Ci MT datasheet for detailed information.

Work pressure:	400 bar
Flow way	380 mm ² (ø22mm)
	50mm ² /hose

Dimension:

LxDxH:	see drawing xø40 ("it" are internal technical measurements giving the length to next component)
Weight:	see table

Installation

After the Selector Valve is connected to the rail the SV22 MT manifold is screwed on to the Selector Valve tee by hand.

Great care must be taken not to damage the o-ring in the connection.

The union nut is tightened by hand, additional tightening by a wrench is acceptable to prevent loosening but not required for tightness issues.
