General

Bracket including bolt for fastening cylinder to the cylinder rail.

Used with 25mm profile rail (4002##) or AISI 316 (-44)

For marine applications two brackets should be used for each cylinder.

Specifications

Material: Galvanised steel / AISI 316(-44)

Profile: 25

Installation

The brackets are fixed to the cylinder rail by two hooks, which engage when it is rotated into position.

The bolt and nut (number 1 on the drawing) can be an ISO or DIN bolt, which fit a 16-17 mm wrench.

For land systems minimum one rail/bracket for each cylinder are required, and for marine two rails/brackets.

Maintenance

General cleaning, inspect for corrosion.
