

## Cylinder unpacking crate

### Item numbers covered by this datasheet

900105 Cylinder unpacking crate

### General

Crate for safely unpacking cylinders supplied on Fire Eater cylinder pallets

### Specifications

Material: Epoxy coated steel.

### Installation

The parts are assembled using the supplied screws. After assembly, the foot plates are to be bolted to the floor.

### Operating

Place the pallet with cylinders inside the crate.

Put the safety chain across the cylinders, so that it is tight and prevents the cylinders from falling over.

Cut the metal straps. Keep clear not to get struck by the sharp metal straps, which are under great tension and will recoil when cut.

Always wear leather or cut resistant gloves and eye protection when unpacking cylinders

### Maintenance

Inspect all assembly points at regular intervals including the floor plate bolts. If loose, retighten or replace as necessary.
