

IV7 Ci actuator adapter kit

General

The adapter kit is used for converting an IV7 valve to accept actuators designed for the Ci IV8 valve. This would typically be Ci IS8 or Ci IM8 actuators.

Parts

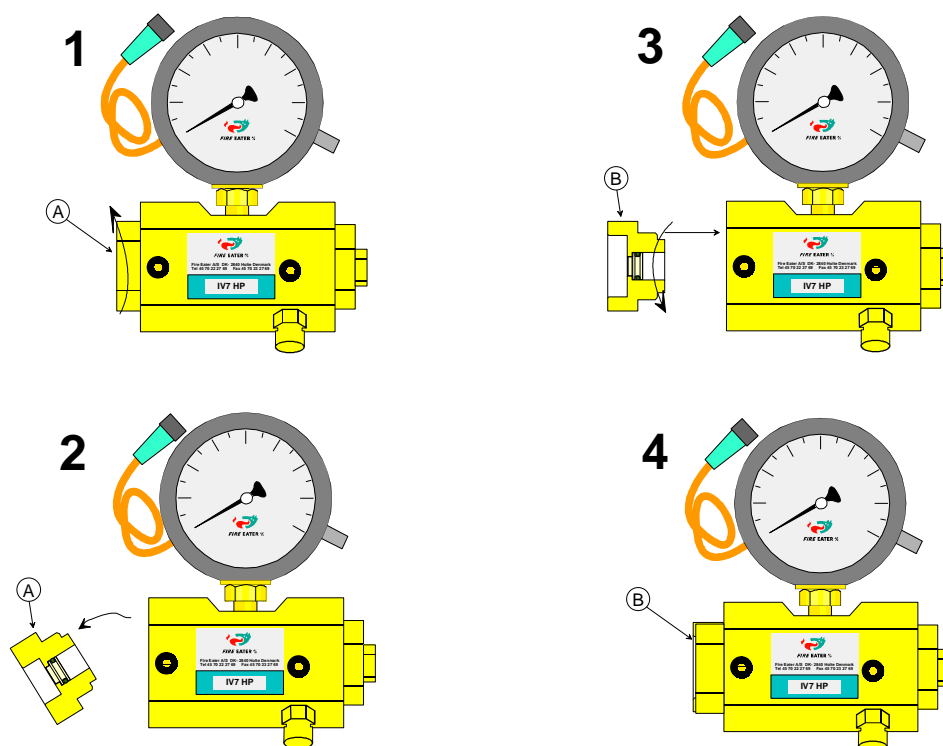

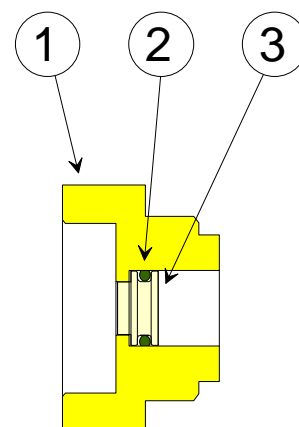

- | | | |
|----|--------|-----------------|
| 1. | 304053 | IS7-IV8 adapter |
| 2. | 302104 | O-ring 7.1×1.6 |
| 3. | 303067 | IV7 EDA piston |

Installation

The IV7 EDA plug (A) is removed from the IV7 valve, the IS7-IV8 adapter 304053 (B) is placed in the IV7.

Be very careful not to activate the IV7 accidentally by pushing on the piston when fitting the IS7-IV8 adapter.

The Ci actuator (IS8, IM8, etc.) may then be screwed into the M20x1 thread. Consult the appropriate Ci actuator datasheet before installation. Remember to reset the actuator before installation!
