Section 5: Fire-Fighting Measures

Extinguishing media

Suitable extinguishing media: Use an extinguishing agent suitable for the surrounding fire.

Unsuitable extinguishing media: Non known.

Special hazards arising from the substance or mixture

No reactivity hazards other than the effects described below

Advice for firefighters

• Firefighting instructions: Depressurize the cylinders by releasing the fire extinguishing system if

connected in this.

Do not activate the release valve if cylinder is not securely fastened.

Remove ignition source if safe to do so.

Move containers from fire area if this can be done without risk.

Use water spray to keep fire-exposed containers cool.

Protection during firefighting: Compressed gas: asphyxiant, suffocation hazard by lack of oxygen.

Special methods: Use fire control measures appropriate for the surrounding fire.

Exposure to fire and heat radiation may cause gas receptacles to rupture. Cool

endangered receptacles with water spray jet from a protected position.

Section 6: Accidental Release Measures

Personal precautions, protective equipment and emergency procedures

Non-emergency personnel: No action shall be taken involving any personal risk or without suitable training.

Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering.

Avoid breathing gas.

Provide adequate ventilation. Wear appropriate respirator when ventilation is

inadequate. Put on appropriate personal protective equipment.

Stay upwind.

Emergency responders: Monitor oxygen level to determine concentration of released product.

Wear self-contained breathing apparatus when entering area unless atmosphere is proved

to be safe.

Ensure adequate air ventilation.

Act in accordance with local emergency plan.

Environmental precautions: None

Methods and materials for containment and cleaning up

· Clean-up procedures: Ventilate with fresh air

Section 7: Handling and Storage

Precautions for safe handling

General Put on appropriate personal protective equipment (see Section 8).

Contains gas under pressure. Do not puncture or incinerate container.

Use equipment rated for cylinder pressure.

Protect cylinders from physical damage; do not drag, roll, slide, or drop.

Use a suitable hand truck for cylinder movement. Do not use valve cap for lifting.

Conditions for safe storage

 Storage Store in accordance with local regulations.

Store away from direct sunlight in a dry, cool and well-ventilated area. Keep container

tightly closed and sealed until ready for use. Cylinders can be stored horizontal or vertical.

Valve cap/guard must be fitted to the cylinder and only to be removed when the cylinder

is securely fastened.

Cylinders are always to be firmly secured to prevent falling or being knocked over.

Cylinder temperatures should not exceed 65 °C (150 °F).

Section 8: Exposure Controls/Personal Protection

All components are exempted from REACH registration in accordance with article 2(7)(a). General:

Annex IV of Regulation EC 1907/2006 (REACH)

Contains no other components or impurities which will influence the classification of the

product.

Occupational exposure limits

General: Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Nitrogen	52%	Oxygen Depletion [Asp	hyxiant]	
Argon	40%	Oxygen Depletion [Asp	hyxiant]	
Carbon dioxide	8%	OSHA PEL: ACGIH TLV (2012)	5.000 ppm	
		TWA:	5.000 ppm	

Appropriate engineering controls:

Oxygen detectors should be used when asphyxiating gases may be released.

Provide adequate general and local exhaust ventilation.

Systems under pressure should be regularly checked for leakages. Ensure exposure is

below occupational exposure limits (where available).

Thermal hazard protection: None necessary.

Environmental exposure controls: None necessary.

Other information: Wear safety glasses EN 166
