

Stainless Steel tube

General

Tube (pipe) used for transport of fluids.

Typically used in:

LFE systems from discharge valve to nozzle and to actuator

PDS systems for pilot activation pressure (activation pressure)

Selector valve systems for pilot pressure for control of selector valve and activation of discharge valves

Specifications

Standard: EN 10217-7
Calibrated

Material: EN 1.4404 / AISI 316

Diameter

Outside: ø6mm

Inside: ø4mm

Max working pressure: 400 bar

Installation

Typically used with compression ring fittings, may be welded or soldered.

Maintenance

Inspect for damages.

Document: 102012 Stainless Steel tube 6mm
